(Systematic Reviews and/or Meta-Analysis)
Type the title of your paper

First Author [a]*****, First affiliation, Address, City and Postcode, Country, orcid, email. *(In the submission phase, please leave blank. Do not write any information)*

Second Author [b], Second affiliation, Address, City and Postcode, Country, orcid, email. *(In the submission phase, Please leave blank. Do not write any information)*

Third Author [c], Third affiliation, Address, City and Postcode, Country, orcid, email. *(In the submission phase, Please leave blank. Do not write any information)*

(MAXIMUM SIX AUTHORS)

Abstract

The abstract of the work should be a single paragraph between 150-200 words. Abstracts for research articles should provide an appropriate overview of the study. Briefly, without a title for a well-structured abstract: Background of the Study (Clearly state what the problem is and the purpose of the study); Method (slightly mention the methods and techniques used in the study); Results: (main findings from research); Conclusion: indicate the main conclusions and comments. (These elements may need some adaptation in the case of discussion papers: Background, Purpose of Study, Sources of Evidence, Main Argument, and Conclusions). Do not write place or university name in the title and abstract. You can write in the method without repeating it in the relevant places. Do not use any statistical sign or number. In addition, no citation, abbreviations, and reference. The abstract should not contain results not presented or proven in the article. Please submit your manuscript blind to the conference system from in a Microsoft Word format. For further information, please get in touch with us at taegcenter@gmail.con

Keywords: First keyword, second keyword, third keyword, fourth keyword; (Select five to seven keywords that are pertinent to the topic yet are also widely used in the field.)

1. INTRODUCTION

Here introduces the paper, and put a conceptional framework, scope of the review, publication time span, if necessary, in a box with the same font size as the rest of the article.. The paragraphs continue from here and are only separated by headings, subheadings, images and formulae. Numbers, bold and 11 pt, arrange the section headings.

The introduction should put the research topic in broad context and explain why it is important. Existing literature on the research topic should be reviewed, and references should be made to articles reflecting the importance of the topic.

References should be shown in parentheses following APA 7 standards. See the end of the document for examples of references. When using APA format, follow the author-date method of in-text citation.

---

* ADDRESS FOR CORRESPONDENCE: Name, Surname, Affiliation, Address, City and Postcode, Country
E-mail address: xxx.xxx@xxx.com / Tel.: +0-000-000-0000

This means that the author's last name and the year of publication for the source should appear in the text, like, for example, (Jones, 1998). One complete reference for each source should appear in the reference list at the end of the paper.

At the end of the Introduction section, research needs (gaps) related to the subject under study should be expressed with justifications.

1.1. Purpose of the study

It should define the purpose of the study under this title. The purpose of the research must be consistent with the results, discussion, conclusions, and recommendations.

2. METHOD AND MATERIALS

The study's methodology section should be sufficiently detailed to enable future research on a related subject. The study's data, computer codes, and data collection instruments should all be available. If big data sets from the open-source database are used, details on access and where the data came from should be provided.

3. RESULTS

In this section, explain publication origin, Types of documents reviewed, Author's opinion of the reviewed literature, And particularly unique or important research findings.
Tables, graphs and images related to the results will be embedded in the text and explained in accordance with APA 7 Style.

Tables

All tables should be numbered with Arabic numerals. Headings should be placed above tables and left justified. Leave one line space between the header and the table. Only horizontal lines should be used within a table to distinguish the column headings from the body and immediately above and below the table. Tables must be embedded into the text and not supplied separately. Table contents should be typed in font size 10.

Table 4
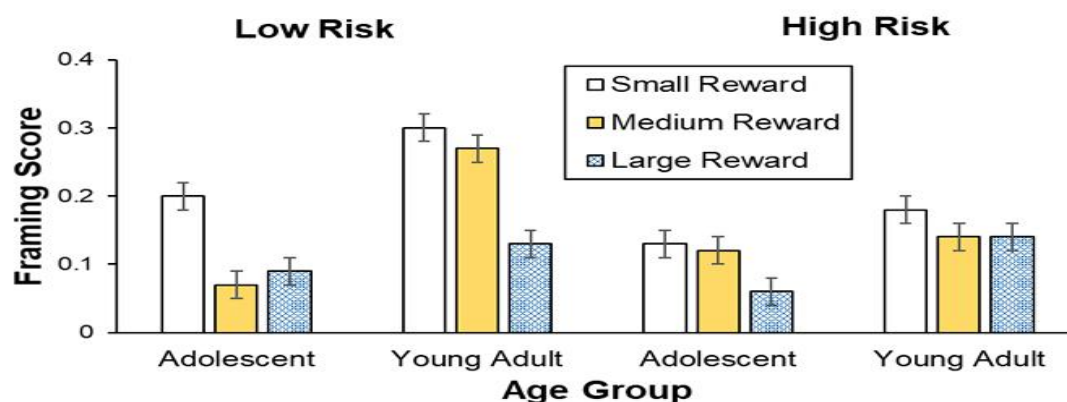

Results of N-Gain Experiment and Control

Class	Test	Total	Mean	Variance	St. dev.
Experiment	Pre-test	4,255	56.11	169.88	13.03
	Post-test	5,238			
Control	Pre-test	4,289	30.59	148.47	12.18
	Post-test	4,820			

Figures

Figures include all graphical displays of information that are not tables. Common types include graphs, charts, drawings, maps, plots, and photos. Just like tables, figures should supplement the text and should be both understandable on their own and referenced fully in the text. This section details elements of formatting writers must use when including a figure in an APA document, gives an example of a figure formatted in APA 7 style. Table contents should be typed in font size 10.

Framing Scores for Different Reward Sizes

4. DISCUSSION

The discussion section must be consistent with the purpose of the research and results sections. The authors discuss the results and their comparison with previous studies. In this section, the authors discuss the results they obtained with the results of similar studies in terms of similarities and differences. Additionally, future research can also be discussed. Whenever possible, care should be taken to benefit from similar articles published in journals searches in the Web of Science and Scopus databases. Relevant articles should be cited in the discussion section and in references according to APA 7 style.

5. CONCLUSION

In this section, in this section, explain especially the conclusions about the research trends. This section does not have to be separate from the discussion. However, if the discussion part is long or complex, the conclusion part can be written separately. In this section, the limitations of the study can also be mentioned.

6. RECOMMENDATION AND FUTURE DIRECTIONS

Recommendations/Future directions may stand alone or form a subsection of the discussion or results and discussion section. These include meaningful suggestions for further research and/or practical applications flowing from the study's conclusions.

REFERENCES

The references should correspond to the APA 7 Style formatting (see Appendix) in alphabetical order. The list of references should contain at least 15 and no more than 40 sources, of which more than 50% are sources

for the last 3-5 years, including at least 10 sources from the Scopus database (at least 70 percentile) and Web of Science (at least 1 and 2 quartiles - Q1-Q2).

Authors Short Bios (optional)

Appendix
The appendix is an optional section that can contain details and data supplemental to the main text— for example, explanations of experimental details that would disrupt the flow of the main text but nonetheless remain crucial to understanding and reproducing the research shown; figures of replicates for experiments of which representative data is shown in the main text can be added here if brief, or as Supplementary data. Mathematical proofs of results not central to the paper can be added as an appendix.

All appendix sections must be cited in the main text. In the appendices, Figures, Tables, etc. If there is more than one appendix, they should be identified as A, B, etc. Formulae and equations in appendices should be given separate numbering: Eq. (A.1), Eq. (A.2), etc.; in a subsequent appendix, Eq. (B.1), and so on.
